

MEYLE-HD stabilizer links

Our engineers are passionate about improving our MEYLE-HD stabilizer links constantly seeking new ways of refining all components. To make installation and removal procedures easier for our customers, more and more MEYLE-HD stabilizer links are designed with a wrench attachment at the ball pin. A distinguishing advantage, in particular over those original designs which lack this value-adding feature.

Owing to the larger ball head the ball surface on MEYLE-HD stabilizer links has been increased by 50%. This way we have managed to significantly

improve the part's load carrying capacity along with its service life. The blue clip-on plastic socket adds additional strength to the MEYLE-HD part.

The results of endurance tests performed at the Hamburg Helmut Schmidt University are an impressive proof of the quality of MEYLE-HD stabilizer links:

No evidence of joint play even after 1,000,000 test cycles!
